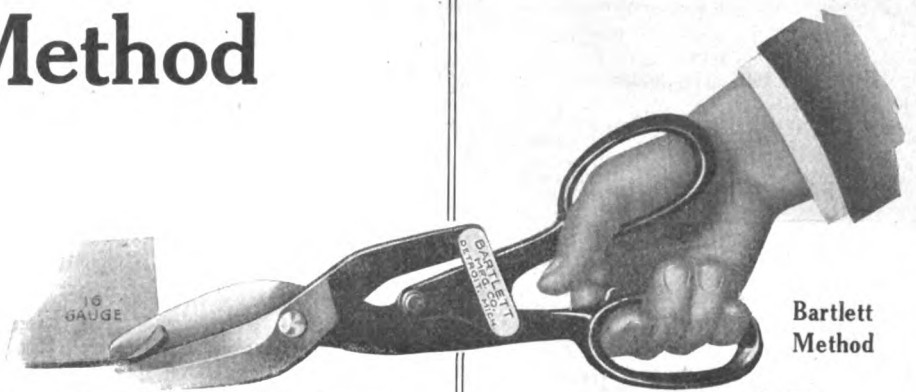
Which Method Do You Prefer?



Bartlett Method

Before answering, note the difference of effort expended in the two methods illustrated. Do you prefer to grip the 16-gauge metal way up near the throat and use short, choppy strokes with ordinary tinners' shears, or would you elect to use

Bartlett Compound Lever Snips

and thus conserve your energy? A one-handed grip on a smaller sized Bartlett Shear will mean a cleaner and quicker cut than a two-handed grip on the ordinary shears. Now name the method you prefer. Sizes range from 7 inches (known as the Vest Pocket Snip) to 14 inches. We also manufacture two sizes of bench shears. Each tool is warranted. Made from only the best of material. Send for circular or ask your dealer about them.
